

Acupuncturist in Saskatoon

Acupuncturist in Saskatoon - IV therapy or Intravenous therapy is the placing of substances straight into a vein. IV therapy has been used in order to correct electrolyte imbalances and to be able to deliver medications in blood transfusions. It can likewise be used as fluid replacement to correct, like for instance, dehydration. The intravenous route is the fastest method to deliver medications and fluids all through the body. Several medications, along with blood transfusions and lethal injections, could only be given intravenously.

Intravenous Vitamin C therapy is an alternative remedy for various medical conditions like for instance cancer. Even though there is still controversy surrounding this type of remedy, a lot of centers dedicate particular treatment regimens. Amongst the reputed benefits of Vitamin C therapy comprise: prolonging survival and increasing the quality of life. Vitamin C is effective in preventing systemic free radical injury and corrects an ascorbate deficiency, that is usually found in people who have cancer. Vitamin C inhibits hyaluronidase. This is an enzyme made by cancer cells that is responsible for the breakdown of healthy tissue, resulting in tumor progression and metastasis. Vitamin C even works synergistically conventional with other conventional cancer treatments.

Different names for Vitamin C, consist of: L-ascorbic acid or L-ascorbate. It is an important nutrient for humans and other animals. It is an important antioxidant and protects the body against stress caused by oxidation. Vitamin C is likewise a co-factor in at least 8 enzymatic reactions including various collagen synthesis reactions which result in the most severe signs of scurvy when they are not working correctly. In animals, these enzyme reactions are very important in preventing bleeding from capillaries and wound-healing.

Vitamin C Mega Dosage

There are several groups and people who support large doses of Vitamin C, over 10 to 100 times more than the Recommended Daily Intake or RDI. They take these amounts either intravenous therapy or orally. There have yet to be large, randomized clinical trials on the effects of high doses performed on the general population. Linus Pauling spent a large part of his life supporting the use of mega doses of vitamin C. He thought the established RDA was sufficient to prevent scurvy but not necessarily a high enough dosage for optimal health.

A mega dose of Vitamin C has been and continues to be used to be able to prevent and treat many various conditions, among which include the common cold, cancer and coronary disease. Current recommendations for Vitamin C are anywhere from 30 - 100 mg on a daily basis. Individuals taking a mega dose may ingest anywhere from 500mg to 1000 mg a day but the side effect of diarrhoea may be a common issue for those who ingest large amounts.
