

## Psychotherapy Saskatoon

Psychotherapy Saskatoon - Neural Therapy was initially uncovered by German physicians Walter and Ferdinand Huneke. They gave it the term "Heilanasthesie", which literally means "curative anaesthesia." The name was later changed to "Segmenttherapie" or "segment therapy", before ultimately becoming "neural therapy," after Huneke. Neural Therapy is a system used to be able to treat and diagnose medical conditions of patients that are otherwise resistant to treatment or hard to treat.

The theory around this particular type of therapy is that trauma can produce long-standing disturbances in the electrochemical function of tissues. Many tissues can be affected including nerves, a ganglion, which is a bunch of nerves and scars. There is no scientific evidence showing that neural therapy is effective in treating any disease or cancer, even if, it has been used to be able to treat pain disorders. Neural therapy is practiced mostly within South America and Europe.

### History

In the year 1925, the German surgeon Ferdinand Huneke launched a new pain drug which contained a local anaesthetic referred to as Procaine. He tried it on his sister who suffered from severe stubborn migraine. He injected it intravenously instead of the suggested intramuscular method. The migraine attack stopped instantly. This reaction impressed him and his brother Walter. They made use of Procaine and Novocaine and sometimes blended it together with caffeine known as "Impletol." This is still used today in migraine medicines. It has been found to be actually effective in numerous painful conditions either by means of local injection or IV.

Ferdinand Huneke then injected during 1940, the painful shoulder of a lady who also suffered osteomyelitis in her leg. She was threatened with amputation, since at that time there were no antibiotics obtainable. The leg wound became itchy but the shoulder pain improved somewhat. The next treatment, he injected the leg wound and the shoulder pain vanished immediately. This reaction is referred to as "Flash Phenomenon."
